Plant Patent 1691

SONJANA CLIMBING STRAWBERRY

Yes, it is true! It grows just as pictured here. You can pick delicious fruit at eye level from this Sonjana plant, which grows up to 6 feet tall and produces berries all the way up. Sonjana Climbing Strawberries are perennial and live year after year. Their runners grow lustily, increasing in length quickly and forming rosettes at intervals. These rosettes produce clusters of flowers from which the berries form profusely. In turn the rosettes produce more runners which bear flowers and fruit, and in this way the marvelous Sonjana grows, climbs and bears until killing frost. The very vigor of the plant makes it advisable to help the runners support the weight of the berries by training them up poles or trellises or wire netting and by tying them loosely where support is needed. Be sure to order these amazing plants today.
